

2007 Water Quality

Updated 6-11-07

Water Quality sampling has started with a completely revised Comprehensive Water Quality Monitoring and Measurement Plan. The number of sites being sampled has increased from 7 to 11 and we will install and measure flow data at 6 tributary and outlet sites. Upstate Freshwater and the Adirondack Watershed Institute under the direction of the SaranacWATERKEEPER will provide a much more detailed analysis of Water Quality. The complete plan will be posted on this site next week.

Updated 5-27-07

This section will show the most current Water Quality Reporting and Plans. Currently the latest available report is 2005 and was produced by Michael Martin of CedarEden Environmental. It can be found in the Information Archive section of this website.

Data on Water Quality has traditionally been posted on the USLA website. Since changing our measurement and reporting relationships, the most current data will appear on this site under this separate Water Quality Section. Michael Martin's prior Lake Reports (2005 and earlier) can still be found on the USLA site. 2006 Data has not yet been reported to us by CSLAP/NYSFOLA although we have reviewed preliminary drafts of this work. No major departure from historic trends has been noted. Any questions on Water Quality can be directed to Jill Reymore - SaranacWATERKEEPER - 637-7616 or Curt Stiles - 359-7053.

More to follow.
